

FAQs

What preparation is required before the treatment?

Before the treatment your dermal therapist may recommend products to prep your skin. This is to ensure your skin is in healthy condition for an optimal outcomes. You must also avoid direct sun exposure for a minimum of two weeks before and after the treatment. The treated area will have hypersensitivity and prone to redness, inflammation and pigmentation changes during this period. Apply and reapply strong SPF daily for maximum sun protection.

What outcome should I expect from this treatment?

Photo-Revelation will gently heat the upper layer of the skin by distributing over thousands of micro pulses through laser energy. The gentle heat will stimulate collagen and elastin and will give a beautiful healthy glow to the skin.

The laser will also diffuse redness without damaging the surrounding tissues, leaving skin more even and radiant. You can expect subtle yet consistent results after each treatment.

How many treatments are required for optimal results?

Optimal results are achieved with 4-6 treatments staged at 2-4 weeks apart followed by regular maintenance. The treatment time will take between 30 minutes to an hour.

FAQs

Is there downtime?

Minimal to no downtime is involved after Photo-Revelation. You can resume your regular activities within 3-5 days. You should endeavour to follow all aftercare instructions provided by your dermal therapist including recommended skincare products. It is also important to keep your skin hydrated. Your skin will be sensitive to UV light following your treatment therefore you should avoid direct sun exposure and use a strong SPF every day.

Is it painful? Will I require local anaesthetic or medication?

The treatment is often described as relaxing and therapeutic therefore local anaesthetic is not required for the treatment.

What are the possible side effects?

While side effects are rare, however you may experience some slight redness following your treatment. This should fade within a few hours.

What skin type is most suitable?

All skin types concerned with ageing, redness, inflammation, fine lines/wrinkles and sun damage - anyone seeking a gentle rejuvenation.

PHOTO-REVELATION

BEFORE AND AFTER

Photo-Revelation is a non-invasive, non-ablative treatment that is proven to diffuse redness, reduce inflammation, improve uneven skin tone and stimulates collagen growth. It can help slow down the effects of ageing resulting in a smooth and even complexion.

Using a 1064nm laser to deliver micro-pulses of laser energy into the skin to stimulate the body's natural healing processes which improves collagen and elastin activity to reduce visible signs of ageing.

Photo-Revelation uses thermal energy to target the dilated blood vessels and broken capillaries that cause persistent skin redness. The heat breaks down these vessels, diffuse redness without damaging the surrounding skin.

The treatment can be performed throughout the year with little to no downtime. It can be used in conjunction with other treatments offered in clinic, and when complemented with a medical grade skincare regime, the final outcome can significantly improve.

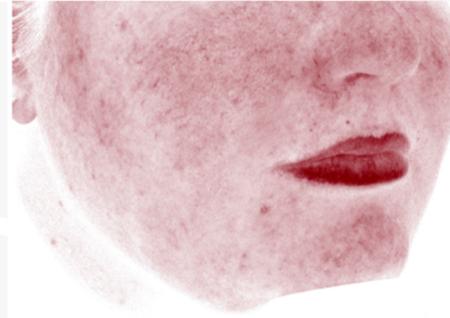

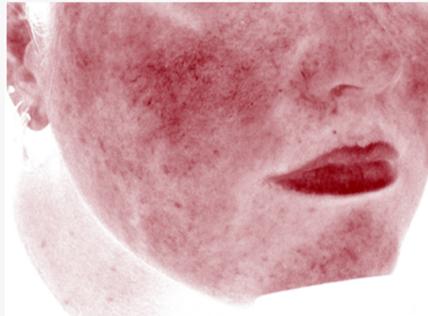

Photo-Revelation is an ideal treatment to address the following skin concerns:

- Diffuse redness
- Reduce inflammation
- Problematic skin and blemishes
- Fine lines and wrinkles
- Enlarged pores
- Uneven skin texture and tone
- Overall skin rejuvenation

Treatments can range from thirty minutes to an hour. The number of treatments required depends on the condition of your skin which will be discussed at your initial consultation. Treatments can be repeated every two to four weeks interval.

The overall result of a Photo-Revelation treatment is a glowing, radiant and uniform complexion that continues improving with each treatment.

**Individual results may vary.*
